

VL Capital Management Core U.S. Equity Strategy

VL Capital Management LLC is a registered investment adviser that provides its services to individuals, trusts, investment companies, and pension plans. The firm employs a research and analysis process based on fundamental value investing principles to develop its investment strategies. VL Capital was founded in 2013 and is registered in New York and Florida.

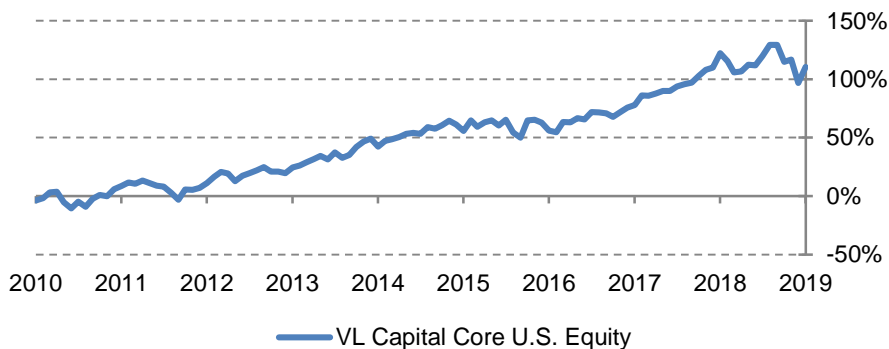

Strategy Overview

The VL Capital Core U.S. Equity Strategy invests in the common stock of the largest United States companies based on total market capitalization. The strategy offers investors access to the largest capitalization segment in the United States equity universe representing approximately 40% of the United States stock market. The Core U.S. Equity Strategy is rebalanced at regular intervals and maintains a low level of position turnover.

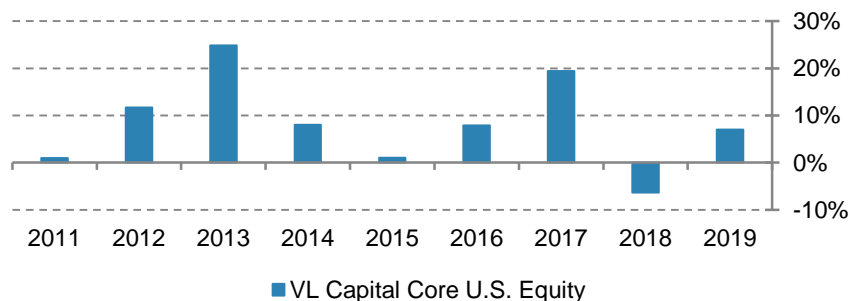

Core Components

- Invests in a basket of large capitalization U.S. stocks
- Benefits from diversification that eliminates company-specific risk
- Tax advantaged due to low turnover of positions

1. The information presented herein is for informational purposes only about VL Capital Management's investment strategies and is not intended as a solicitation to invest. All returns are provided net of management fees. Past performance is not an indication or guarantee of future results. Charts and graphs are provided for illustrative purposes and may reflect hypothetical historical performance.

2. The Total Return represents the cumulative return from the First Value Date to present and may include both back-tested and live returns.

3. The First Value Date is the first day for which there is a calculated value (either live or back-tested) for a given strategy.

4. The Launch Date designates the date upon which the values of a given strategy are first considered live: values provided for any date or time period prior to the strategy's Launch Date are considered back-tested. Back-tested performance, which is hypothetical and not actual performance, is subject to inherent limitations because it reflects application of a methodology and selection of constituents in hindsight. No theoretical approach can take into account all of the factors in the markets in general and the impact of decisions that might have been made during the actual operation of a strategy. Actual returns may differ from, and be lower than, back-tested returns.
